PROFESSIONAL SUMMARY

Full-Stack Developer with experience designing and building business applications, workflow automation systems, and LLM-integrated software. Skilled in Next.js, React, Node.js, TypeScript, Prisma ORM, MySQL, and PostgreSQL. Hands-on experience with AI agent development using LangChain and LangGraph, prompt engineering, and no-code automation with n8n. Focused on building maintainable, scalable full-stack systems that solve real operational challenges.

EDUCATION

B.S. in Information Technology, University of St. La Salle

Bacolod City, Philippines | **2021 - 2025**

Cum Laude | Consistent Dean's Lister

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, Next.js, Node.js, PHP, SQL

Backend & Database: Prisma ORM, MySQL, MariaDB, PostgreSQL, REST APIs, Supabase, pgvector

Frontend: React, Tailwind CSS, SCSS, HTML, CSS

AI & Automation: LLM Integration, RAG (Retrieval-Augmented Generation), Vector Embeddings, OpenAI API, LangChain, LangGraph, n8n, Prompt Engineering, Claude Code

DevOps / Infrastructure: Docker, VPS Deployment, Vercel, Railway, Git, GitHub, CMS / Platforms: WordPress, BigCommerce

PROFESSIONAL EXPERIENCE

Full-Stack Developer - OnePoint

October 2025 - Present

- Architected and built a centralized proposal management platform from the ground up using Next.js, Prisma ORM, and MySQL, replacing manual proposal workflows, reducing turnaround time by ~40% through a centralized Next.js + MySQL platform.
- Designed the system's database architecture, backend services, API layer, and application workflows to support proposal generation, approvals, version control, and document management.
- Developed production-ready full-stack features and optimized application performance, maintainability, and reliability.
- Developed RESTful APIs and backend integrations enabling data synchronization between internal systems and third-party services.
- Migrated the proposal management platform to a self-hosted VPS using Docker (admin portal, client portal, MariaDB), cutting hosting costs while enabling production use across the company for client proposal tracking.

E-Commerce Developer Intern - Binary Anvil

February 2025 - May 2025

- Built and launched a responsive BigCommerce storefront with custom theme components and optimized page performance across mobile and desktop devices.
- Ensured cross-browser and cross-device compatibility through systematic testing and performance profiling.

PROJECTS

Proposal Management System | Full-stack Developer

Stack: Next.js · TypeScript · Prisma ORM · MySQL · Claude API · Docker · VPS

- Developed a full-stack proposal management platform to create, manage, and track client proposals across the entire sales lifecycle.
- Integrated AI-powered features for discovery session assistance, automated brief generation, and end-to-end proposal creation using LLM integration.
- Implemented secure authentication, role-based access control (RBAC), document workflows, and multi-stage approval processes.
- Designed normalized relational database architecture using Prisma ORM and MySQL, and built RESTful APIs for proposal management and version control.
- Deployed and now actively used in production by the company; migrated to self-hosted VPS deployment using Docker containers (admin portal, client portal, MariaDB) to reduce infrastructure costs, enabling internal teams to send and track proposal activity with clients and improving overall efficiency in client relationship management.

Hotel AI Concierge Chatbot | Full-stack Developer / AI Automation Engineer

Stack: n8n · Supabase (PostgreSQL + pgvector) · OpenAI API · RAG · Vercel · Railway

- Built an AI-powered hotel concierge chatbot with RAG-based question answering, fallback handling for unrelated/unanswerable queries, and automated escalation via a contact form.
- Designed a PDF ingestion pipeline that uploads hotel documents to Supabase Storage, extracts and chunks content, and generates vector embeddings for semantic retrieval.
- Implemented RAG retrieval pipeline connecting chunked embeddings to the chatbot for context-aware, accurate responses grounded in hotel documentation.
- Built an automated contact/escalation workflow that stores unanswered queries in the database and emails admins with full context — contact details, the unanswered question, a conversation summary, and the complete transcript up to that point.
- Delivered as three interconnected n8n workflows (PDF ingestion, RAG chatbot, contact form processing), using Supabase with the pgvector extension for embedding storage and similarity search.

AI Expense Tracker | Full-stack Developer

Stack: Next.js · TypeScript · Supabase · PostgreSQL · n8n · AI Vision API

- Developed an AI-powered expense management platform that automates receipt processing, and expense and financial record organization.
- Built an automated receipt analysis workflow using AI vision models to extract merchant details, transaction amounts, dates, and itemized expenses with high accuracy.
- Designed normalized relational database schema using Supabase and PostgreSQL with structured receipt and line-item tables.
- Implemented end-to-end workflows for image processing, data extraction, file management, and automated expense categorization using n8n.
